

Title: Online Auction System

PART OF THE REQUIREMENTS NOT COMPLETED/IMPLEMENTED IN THE PROJECT

1. Login Signup

- User authentication
- If a user fails to enter correct credentials after multiple attempts, the system temporarily locks the account and requires additional verification steps (CAPTCHA)
- Signing up via Google, Twitter, LinkedIn (third-party services)

2. Products page

- Allowing logged users to save product auctions of interest to wishlist and to view that wishlist
- Live auctions - where auctions are listed and bidders select auction and bid on the products in real time
- Automatic bidding - once the bidder has placed a bid, the system will automatically increment the bid up to the specific limit they specify.
- Sending real - time notifications on bid status of user
- Feedback system and implementation
